Laravel · MySQL

TWO DECADES OF COUNTER BUSINESS, NO COUNTER ON THE INTERNET

AutoNation Rent a Car was founded in Amman in 2003 and runs two branches — the capital and Queen Alia International Airport — with a fleet spanning small cars, mid-sized sedans, SUVs, 4WDs and passenger vans. The business was built on walk-ins, phone reservations and repeat corporate customers.

THE PROBLEM

- No online reservation — every booking passed through a person.
- Insurance and waiver options were explained verbally at pickup.
- Arriving travellers waited at the counter while paperwork was prepared.
- Aggregators captured the search traffic the brand had earned since 2003.

WHAT IT DEMANDED

- A booking flow that sells coverage rather than explaining it later.
- Online check-in, so the car is ready when the traveller lands.
- All-inclusive pricing stated up front: CDW, TPL, TP, unlimited mileage, VAT.
- Self-service booking management for changes and cancellations.

The promise the counter had always made in person — no excess, no deposit, no waiting — had to survive being written down and sold on a screen.

WHAT WE SET OUT TO BUILD

SELL THE WAIVER ONLINE

Make the zero-liability waiver a clear, priced choice inside the flow instead of a conversation at pickup.

PRICE WITH NOTHING HIDDEN

Insurance, mileage and VAT included in the headline rate, with the running total always on screen.

REMOVE THE QUEUE

Online check-in collects licence, passport and flight details before arrival.

SERVE ARRIVALS AT QAIA

Airport-first search defaults, flight number capture and multi-currency display for inbound travellers.

SCOPE OF WORK

PRODUCT DESIGN	Information architecture, booking and check-in flows, fleet catalogue, insurance and extras merchandising, responsive UI system.
ENGINEERING	Laravel application, MySQL schema for fleet, rates, waivers and reservations, stateful booking process, coupon engine, payment and confirmation.
ADMIN TOOLING	Vehicle, category, rate and coupon management; booking lookup, modification and check-in records.
GROWTH	Technical SEO, category and location landing pages, structured data, multilingual and multi-currency support.

APPROACH

We started from the counter script — what staff ask, what they explain, what they upsell — and turned each step into a screen, so the online journey ends with the same paperwork the branch already needs.

ORANGE TO MOVE, NAVY TO DECIDE

The brand's orange carries the header, the offers and every price; navy carries the commitments — the booking summary, the confirm buttons, the fine print. Full-bleed video and landscape imagery set the scene, and the search panel sits on top of it as a plain white form with six fields and one button.

PALETTE

PRINCIPLES

- Orange proposes, navy confirms — never the reverse.
- The booking summary is visible on every step of the process.
- Cards for vehicles, plain type for terms; no decorative tables.

SEARCH, CHOOSE, COVER, CHECK IN

One stateful process carries the reservation from the first date field to the confirmation.

The booking panel on the right restates the vehicle, the branch, the days and the total on every screen, and each decision the traveller makes is priced the moment it is made.

01 Dates

Pick-up and drop-off branch, date and time.

02 Vehicle

Five categories, spec and insurance on the card.

03 Insurance

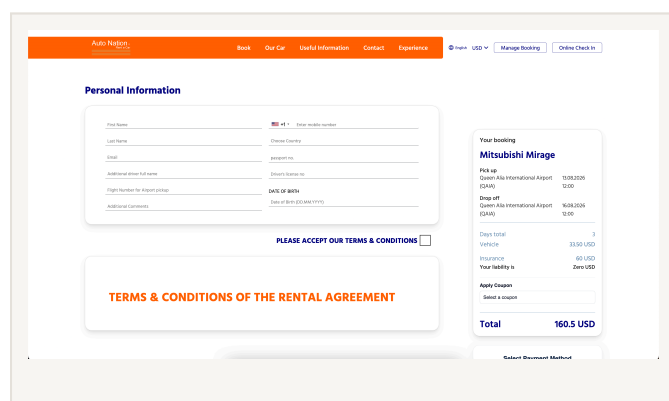

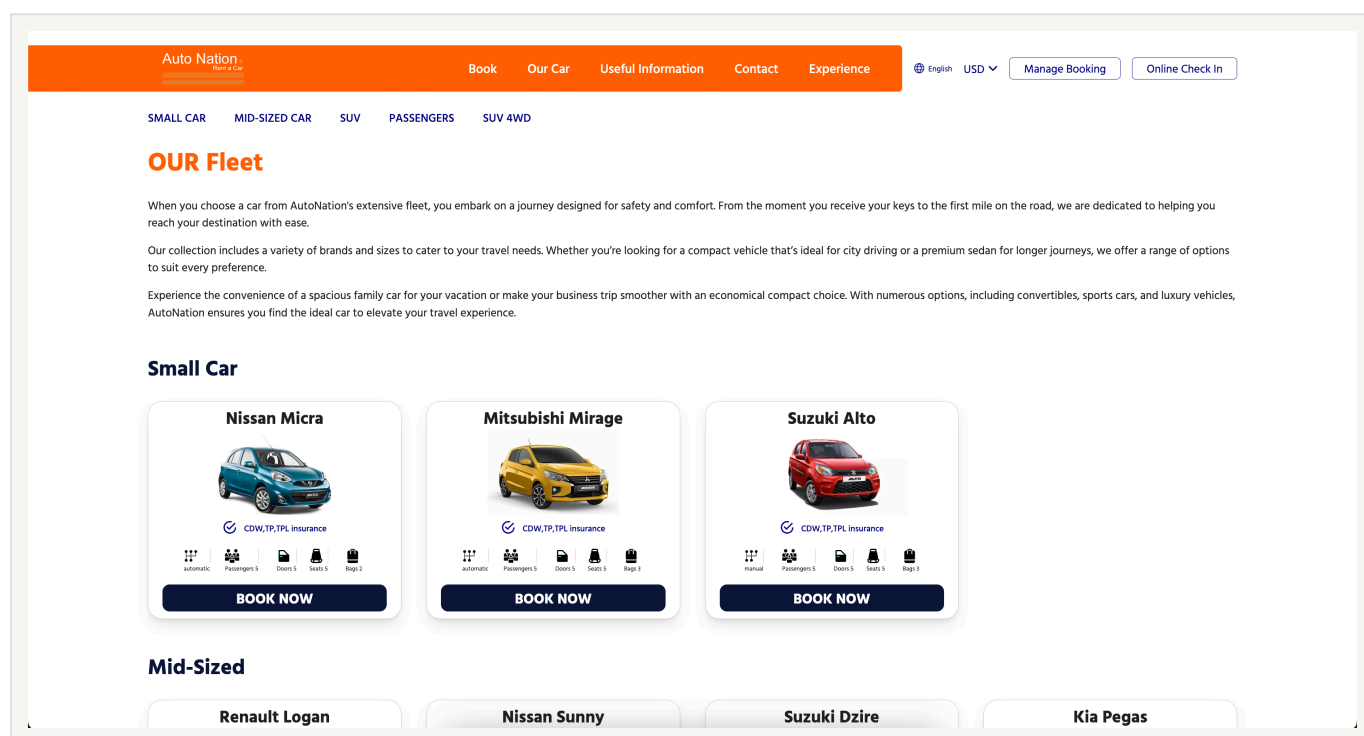

Full liability waiver, priced per day.

04 Extras

Roadside protection, WiFi, equipment.

05 Details & pay

Driver, licence, passport, coupon, payment.

DETAILS THAT DO THE WORK

- Vehicle cards state transmission, passengers, doors, seats and bags before the click.
- Licence, passport and additional driver captured online, not at the desk.
- Flight number lets the branch hold the car for delayed arrivals.
- Coupon codes apply against the live total, terms shown in place.

THE WAIVER, SOLD PROPERLY

Choose AutoNation Full Liability waiver and relax!

Auto Nation full coverage insurance is undoubtedly the best option for your no excess car rental to travel completely at ease. So, what does this insurance cover?

- Zero excess:**
You won't have to pay any extra costs in the event of an accident or incident your excess is lowered to 0 JOD
- No blocking deposit amount on your card:**
Auto Nation super insurance allows you to rent a car with no excess and without having to leave deposits with your card. Moreover, you will have the highest level of cover and protection against any occurrence.

ADD
Only 20 USD PER DAY

Your booking

Mitsubishi Mirage

Pick up
Queen Alia International Airport (QAIA) 13.08.2026 12:00

Drop off
Queen Alia International Airport (QAIA) 16.08.2026 12:00

Days total	3
Vehicle	33.50 USD
Your liability is	700 USD

Total
100.50 USD

The insurance step states the offer in the customer's terms — zero excess, no blocking deposit — puts the daily price beside the button, and shows the effect on the total immediately. Declining is a first-class choice: the alternative button sits directly beneath, with the liability figure spelled out.

ONLINE CHECK-IN

Travellers complete documents before arrival, so the branch hands over keys rather than forms — the site's answer to waiting time at the counter.

MANAGE BOOKING

Look up a reservation, change dates or cancel, without calling Amman.

BUILT ON LARAVEL AND MYSQL

A single Laravel application backed by MySQL. Vehicles, categories, rates, waivers, extras and coupons are all data, so the Amman team adjusts pricing or adds a car without a deployment.

APPLICATION

- Laravel MVC with a dedicated pricing service
- Tokenised booking process, resumable by URL
- Blade templating with a shared component layer
- Role-based admin authentication

DATA MODEL

- Vehicles and five fleet categories
- Rate tables by branch, duration and season
- Waivers, extras and per-day pricing rules
- Reservations, check-in records and coupons

ENGINEERING DECISIONS

Pricing in one place	Vehicle rate, waiver, extras, coupon and VAT resolve through one service, so the summary panel and the payment page can never disagree.
Currency and language	USD and local currency switch at the layout level, with the language selector built for additional locales.
Server-rendered by default	Pages ship as HTML for crawlability and first-load speed; interactivity is layered on where it earns its weight.
Operational safeguards	Terms acceptance, driver documentation and liability figures are enforced in the booking logic, so what the customer agreed to online is what the branch sees.

WINNING THE SEARCH BEFORE THE BOOKING

Rental demand in Jordan is captured at the query. The site is structured so that each way a traveller phrases the search has a page built to answer it.

CATEGORY PAGES

Small car, mid-sized, SUV, passengers and SUV 4WD each get an indexable page matching how travellers shop.

AIRPORT INTENT

Queen Alia International Airport and Amman city pickup are addressed directly, with a live search panel on each.

USEFUL INFORMATION

Licence, deposit, insurance and driving-in-Jordan questions answered on page with structured data.

ALL-INCLUSIVE FRAMING

CDW, TPL, TP, unlimited mileage and VAT stated in the hero, which is exactly what comparison shoppers search for.

OUTCOME

AutoNation now takes reservations without a phone call. A traveller lands from search, sees the all-inclusive rate, picks a car, decides on the waiver, checks in online and collects the keys — and the booking, the customer record and the margin stay with AutoNation. The Amman team runs fleet, rates, waivers and coupons from the admin, and the platform is built to take on new branches and languages as the business grows.
