

ONE WALL OF INDIAN BRANDS, SOLD BY THE TILE

A shared brand wall where Indian businesses buy a space, upload their own creative and become searchable — with brand profiles, admin review and buyer analytics behind it. Designed and engineered end to end by Edion Web Technologies.

SCOPE

Product design, web platform, SEO

POSITIONING

One Space. One Brand. One India.

SMALL BRANDS CAN'T AFFORD TO BE FOUND ON THEIR OWN

A dental clinic in Patiala, a jeweller in Chandigarh, a school, a taxi service, an air-conditioning dealer — each has a logo, a location and a customer base, and none has the budget to compete for search visibility alone. Brands In India set out to sell them something simpler than a marketing campaign: a permanent, visible space on a wall everyone else is also on.

THE PROBLEM

- Directory listings look identical and are read by nobody.
- Building and maintaining a site is beyond most small operators.
- Paid advertising ends the moment the budget does.
- Local reputation doesn't travel beyond the neighbourhood.

WHAT IT DEMANDED

- A purchase a shop owner can complete alone, in minutes.
- Space that shows the brand's own artwork, not a text row.
- Search and location filters so the wall works as a directory too.
- Editorial control, so one bad tile doesn't devalue every other.

The product is inventory, not content: a finite wall of spaces whose value comes from every other brand standing on it.

WHAT WE SET OUT TO BUILD

MAKE THE WALL THE PRODUCT

A single scrolling grid where sold tiles show real brand artwork and unsold ones openly invite a buyer.

SELF-SERVE PURCHASE

Pick a space, create an account, pay and upload — no sales call, no agency in between.

GIVE EVERY TILE A PAGE

Behind each space, a brand profile with details, category and location that search engines can index.

PROVE THE VALUE BACK

A dashboard that shows a buyer what their space is doing, so renewal is a decision based on numbers.

SCOPE OF WORK

PRODUCT DESIGN	Grid concept and layout, space-selection and purchase flow, brand profile, search and location UI, buyer dashboard, responsive system.
ENGINEERING	Grid inventory model, account creation with Google and phone sign-in, creative upload and rendering, payments, profile pages.
ADMIN	Creative approval queue, brand verification, space allocation and expiry, refund handling.
GROWTH	Indexable brand, category and city pages, keyword architecture around "brands in India", FAQ content and analytics.

APPROACH

We treated the grid as inventory from the first sketch: every tile is a record with a position, a size, an owner, a creative and a lifespan. The interface is a view of that inventory, which is why buying, approving and expiring a space all behave the same way.

THE BRANDS ARE THE DESIGN

Every tile is somebody else's artwork, in somebody else's colours. The platform's own design therefore does almost nothing: a white header, one search field, one orange action, and a thin spectrum rule at the top of the page as the only decoration. Chrome that competed with the wall would make the wall worth less.

Spectrum rule

PRINCIPLES

- Platform colour never appears inside a tile.
- Empty spaces stay visible — scarcity is the sales pitch.
- One search field, one location filter, one orange button.

FIVE STEPS FROM BROWSING TO LIVE

An unsold tile carries its own call to action — "Buy me" — so the wall sells itself wherever a visitor happens to be looking. From that click the purchase runs without assistance: account, payment, artwork, review, live.

01 Pick a space

Choose position and size on the live grid.

02 Create account

Email, Google or phone — whichever the owner has.

03 Pay

Space reserved on payment, refund policy stated.

04 Upload creative

Brand artwork plus profile details and location.

05 Approved & live

Admin review, then the tile joins the wall.

REMOVING THE FRICTION

- Three ways in — email, Google, phone — because a shop owner may have any of them and not the others.
- The wall stays visible beside the form, so signing in never feels like leaving the product.
- Full brand details are gated behind sign-in, which turns curiosity into accounts.
- Refund terms are published, not negotiated.

A WALL TO LOOK AT, A DIRECTORY TO USE

The grid is how the platform is understood; search is how it is used. One field looks up a brand by name, a location filter narrows to a city, and categories group the wall by what these businesses actually do. Every route ends at the same brand profile.

BRAND PROFILES

Each purchased space resolves to a page carrying the brand's details, category, city and contact route.

SEARCH & LOCATION

Name search and city filtering make the wall usable as a directory rather than a poster.

BUYER DASHBOARD

Owners manage their space, update creative and see how their tile is performing.

ANALYTICS FOR BUYERS

- Views and clicks recorded per space, not per site.
- Performance shown against the period purchased.
- Renewal decided on numbers rather than goodwill.

ADMIN APPROVAL

- Every creative reviewed before it reaches the wall.
- Brand details verified against the account.
- Spaces expire and return to inventory automatically.

THE GRID IS A DATABASE, NOT A LAYOUT

A tile is a row: position, span, owner, creative, status and period. The wall is rendered from that table, so selling, approving, expiring and reselling a space are all state changes rather than layout work.

APPLICATION

- Server-rendered grid with lazy loading as the wall grows
- Email, Google and phone authentication
- Creative upload, resizing and safe rendering
- Payment, reservation and refund handling

DATA MODEL

- Spaces: position, span, price, status
- Brands: profile, category, city, owner
- Orders, periods and renewals
- Impressions and clicks per space

ENGINEERING DECISIONS

Inventory, not pages	One spaces table drives the wall, the purchase flow and the admin queue, so a space can never be sold twice or shown while unapproved.
Foreign artwork, contained	Uploads are normalised to the tile's aspect and served from one path, so hundreds of unrelated images render as a coherent wall.
Weight of a dense page	The wall is image-heavy by definition, so tiles load progressively and are compressed on upload rather than at request time.
Approval as state	Status governs the wall, the profile page and the sitemap together, so nothing unreviewed is ever public or indexed.

VISIBILITY IS WHAT THE BUYER PAID FOR

Search performance isn't a marketing extra here — it is the thing being sold. The site's structure exists so that a brand's space can be found by someone who has never heard of Brands In India.

BRAND PAGES

Every purchased space has its own indexable page, which is how a small brand gains a search presence it could not build alone.

CATEGORY & CITY

Sector and location pages capture the way people search: the trade plus the place.

HEAD TERMS

The platform itself targets brand-discovery queries — top, trusted and popular brands in India — that feed the whole wall.

ANSWERS ON PAGE

About, FAQ, privacy and refund pages carry the trust signals a paid purchase requires.

OUTCOME

Brands In India runs as a live marketplace for its own inventory. Businesses across sectors and cities — clinics, schools, jewellers, consultants, manufacturers, transport operators — hold spaces on one wall, each with a profile behind it and numbers to justify the next renewal. The team sells, reviews and expires spaces from the admin, and the grid grows without a redesign because it was built as data from the start.
